10 **Why Choose DES** 13
Six reasons institutions work with us

11 **Get in Touch** 14
How to reach our team in Addis Ababa

> ***"Designed locally. Supported locally."***

01 · ABOUT DES

Technology partners who understand the country as well as the code.

Digital Enterprise Solutions PLC is an Ethiopian technology company. Our head office is in Addis Ababa. We help banks, ministries, businesses and public agencies use technology with confidence.

Every system we build fits local networks, languages and laws. We test it in real Ethiopian conditions before launch. Our engineers, trainers and analysts work directly with institutions across the country. We do not work through middlemen or from abroad.

Good technology fails without skilled users, so we teach while we build. When the project ends, your staff can run the system alone. Our global partners bring proven methods and modern tools. Your project team and account manager stay in Ethiopia.

HEADQUARTERS
Addis Ababa, Ethiopia

Digital Enterprise Solutions PLC

PROJECT TEAM
100% based in Ethiopia

LANGUAGES
Amharic and English as standard

ENGAGEMENTS
Advice · Delivery · Training · Support

GLOBAL PARTNER
International partner, Dubai, UAE

OUR VISION

Institutions across Ethiopia serve people faster with reliable technology, led by local experts.

OUR MISSION

We build systems that fit Ethiopian conditions. We teach every client team to own and improve them.

Strategic briefing with a client delegation

02 · AT A GLANCE

One local team, every step.

3 Services, one accountable team	**4** Clear steps in every project	**ISO** 9001:2015 through our partner

GLOBAL PARTNERSHIP

Local delivery, international standards.

We partner with an international technology group in Dubai. Every project gets proven methods and modern tools. The delivery, the engineers and the responsibility stay in Ethiopia.

DES PLC
Addis Ababa, Ethiopia
Delivery · engineering · training

PARTNERSHIP

Global Partner
Dubai, United Arab Emirates
Global standards · technology access

What DES brings

Local engineers and trainers, work in two languages, strong NBE and INSA knowledge and support on site.

What the partnership adds

International standards, certified payment hardware, enterprise technology and specialist trainers.

What that means for you

One Ethiopian partner and a local contract, with the strength of a regional group behind the project.

ETHIOPIA · HEAD OFFICE

Delivery from Addis Ababa, on site and online, to regional offices and branches.

INTERNATIONAL · GLOBAL PARTNER

Standards, new technology and expert trainers behind every project.

03 · WHY LOCAL MATTERS

Solutions designed in Addis, not adapted from abroad.

Most systems that struggle in Ethiopia were not built badly. They were built somewhere else, for somewhere else.

Amharic and English 01

Screens and materials in both languages are standard. We do not add them at the end only if the budget allows.

Help nearby 02

Our engineers in Ethiopia come to your site. There is no foreign support queue and no time zone delay between a fault and a fix.

Built for real bandwidth 03

We design offline and low connection modes from the start. Slow or unstable internet is a normal condition here.

We know the rules 04

We understand NBE, INSA and public procurement rules from day one. We do not discover them during final testing.

WHO WE SERVE

Institutions that citizens depend on.

Some sectors cannot afford downtime or mistakes. A failed system there becomes a public problem, not an internal one.

Banking & finance
Digital channels, cards and compliance

Government
Online services for citizens

Energy & utilities
Reliable control and billing systems

Telecom & networks
Network and system advice

Insurance & risk
Faster claims and better risk tools

Logistics & trade
Connected tracking and trade systems

Education & health
Digital skills, student and patient systems

Business & SME
Growth through digital tools

04 · WHAT WE DO

Strong systems and skilled people, from one team.

IT consulting gives you strong, secure systems. Payment technology keeps card acceptance working every time. Corporate training gives your staff the skills to run it all. Choose one service or all three. Either way, one DES team takes full responsibility.

PRACTICE 01

IT Consulting

Networks, cloud, security and software.

- Security and risk
- Networks and data centres
- Cloud services
- Daily system care
- POS, ERP and cash registers
- Custom software
- Practical AI

PRACTICE 02

Payment Technology

Card terminals and the platforms behind them.

- Certified card terminals
- Installation and key loading
- Terminal management system
- Remote key injection
- Cloud ECR integration
- SoftPOS, tap on phone
- Acquiring and switching

PRACTICE 03

Corporate Training

Twelve tracks for every function and level.

- Leadership and management
- Strategy, governance and risk
- Finance, banking and accounting
- Sales and customer service
- HR and people development
- Operations and projects
- Digital, AI and IT skills

NOT SURE WHERE TO START?

Tell us your main problem and we will recommend the best first step.

I need to upgrade our systems	PAGE 7
I need to accept card payments	PAGE 8
I need to build our team's skills	PAGE 10
I want to speak with your team	PAGE 14

05 · PRACTICE 01

IT Consulting

Advice, infrastructure and practical support that keeps your systems secure, current and running. Strong systems protect your data, your staff and your customers.

Security and risk

We assess risks, protect systems and respond to attacks. We teach staff safe habits and follow INSA and NBE rules.

Networks and data centres

We plan, install and maintain your networks, servers and storage from start to finish.

Cloud services

Secure cloud, hybrid and local designs. They suit local internet speeds and rules on where data is kept.

Daily system care

Our local engineers watch your systems every day and fix problems before your users notice.

Custom software and integration

Software built for your exact processes. It connects older platforms, payment networks and registries.

Digital government

Online service portals and digital workflows. They reduce office visits and processing time.

POS, ERP and cash registers

We supply and support point of sale, ERP and cash register systems, both hardware and software.

Practical AI

Document reading and chat assistants that save staff time and understand local languages.

And much more

Have a different need? Share your idea and we will shape a service that fits it. Every project includes training for the people who will run the system.

06 · PRACTICE 02

Payment Technology

Card payments should work every time. We make that happen for banks, microfinance institutions and payment companies across Ethiopia. Our partners supply certified terminals. Our local team prepares, installs and services every device.

Banks | Microfinance institutions | Payment companies | Merchants

01 Choose and order

You tell us your needs. We recommend terminals and handle import and customs.

02 Install and activate

We install each terminal and load its security keys. Each merchant gets a short training.

03 Connect and integrate

We link terminals to your cash registers, ERP and accounting tools.

04 Service and support

We watch every device, repair faults quickly and keep spare parts in stock.

THE HARDWARE

Certified devices, ready for NBE.

Hardware range

Smart Android terminals, keypad models, PIN pads, sound boxes and cash registers.

Certified devices

Terminals hold PCI PTS and EMV Level 1 and 2 approval, including contactless.

Self service payments

Payment units for kiosks, vending machines, parking, fuel stations and EV chargers.

Ready for NBE

We give you every certificate and document that the National Bank of Ethiopia asks for.

06 · PAYMENT SOFTWARE

Run payments smarter.

Terminals need strong software behind them. Our platforms keep every device safe, up to date and profitable. You choose where they run.

MANAGE

Terminal management system

See and control every terminal from one screen, including other brands already in the field.

Bulk updates · Live status · App control · User permissions

Application marketplace

Publish and install payment apps on your terminals. Banks, merchants and developers share one store.

PROTECT AND ASSIST

Remote key injection

Load security keys into terminals from a distance. Every transfer is encrypted and PCI compliant.

No site visits · Central key control · Lower costs

Remote assistance

Our support team sees the terminal screen from Addis Ababa and solves most problems in minutes.

Screen sharing · Secure link · Error logs

CONNECT AND ACCEPT

Cloud ECR integration

Your cash register sends the amount to the terminal over the internet. No cables.

SoftPOS, tap on phone

Accept cards, QR codes and wallets on an NFC phone with Android 10 or later. Meets the MPoC standard.

Acquiring and switching

Card issuing, merchant payments, fraud checks and settlement for banks.

> **Your choice of hosting.** Use our cloud, or keep a private copy on your own servers. Both options support local data rules.

07 · PRACTICE 03

Corporate Training

We do not run a fixed course list. Twelve tracks cover every part of the business. They range from leadership and finance to customer service, operations and technology. We shape each programme around your sector, your people and your goals.

- 01 Leadership & Management
- 02 Strategy & Governance
- 03 Finance & Accounting
- 04 Banking & Financial Services
- 05 Sales & Customer Service
- 06 HR & People Development
- 07 Operations & Procurement
- 08 Project Management
- 09 Communication Skills
- 10 Compliance & Safety
- 11 Digital Transformation & AI
- 12 IT & Cybersecurity

+ Custom programmes, built to your requirement

Programme coordination session

Built for each job

Each course matches the daily work of the people in the room.

Learn on your real system

Staff learn during installation, on the system they will run.

Follow up classes

Short refreshers keep skills current as systems and rules change.

Proof of learning

Attendance records, test results, certificates and an evaluation report.

FORMATS

Onsite at your offices or in Addis Ababa · **Online** for regional offices and branches · Materials in Amharic and English

DELIVERED WITH OUR PARTNER IN 7 COUNTRIES

Ethiopia · UAE · Turkey · Singapore · United States · Canada · Sweden

You can find the audience, modules and results for every track in the **DES Corporate Training Catalogue 2027**.

08 · QUALITY ASSURANCE

Quality you can check.

Quality is not a promise. It is a system. Joint projects with our international partner follow its ISO 9001:2015 quality management system. The way we work is written down, reviewed and the same every time.

- **Every step follows a written process**
- **We review and improve after each project**
- **The same standard in every country**
- **Clear records you can audit**

WHAT IT MEANS FOR YOU

Written goals first

Goals are agreed in writing before any design work starts.

Checked materials

Every version of our courses and documents is reviewed and controlled.

Qualified people

Trainer and engineer qualifications are recorded and checked.

Your feedback counts

Feedback after each project shapes the next one.

Clear fixes

If we miss a standard, one owner fixes it by a set deadline.

Regular reviews

Managers review performance on a fixed cycle and track actions.

Our international partner holds the ISO 9001:2015 certification. DES PLC does not hold this certification itself at the date of this profile.

09 · HOW WE WORK

Four clear steps.

Every DES project follows the same order, so you always know what comes next. We design the system and the training plan together. Your staff learn while we build.

STEP 1
Listen

Understand your real needs

We visit your offices and meet the people who do the work, to learn how things run today.

STEP 2
Plan

Design systems and skills together

We design the system and the training plan at the same time to fit your budget and rules.

STEP 3
Build

Install while your team learns

We install in stages with regular checks. Your staff practise on the system as it grows.

STEP 4
Grow

Support you long after launch

Our local team stays available, reviews your progress and plans the next improvements.

"Listen first. Plan together. Build with care. Grow for years."

ENGAGEMENT MODELS

Three ways to start.

Expert advice

A short project to study one problem and plan the solution.

- Review of current systems
- A clear plan and roadmap
- NBE and INSA compliance check
- Vendor and product advice

Full project

We design, build and launch the solution while your staff learn.

- Networks and cloud
- Payment and business systems
- Custom software
- Support after launch

Training only

A course for one team or visiting group, matched to each role.

- Skills check before the course
- A course written for you
- On site or online
- More sessions later

Why choose DES?

Many companies sell technology. Few stay to make it work. DES builds for Ethiopian conditions and stays with you after launch.

01 Made for Ethiopia

Every system works in Amharic and English, and on slow or unstable internet.

02 Help nearby

Engineers in Ethiopia support you on site, never from a foreign time zone.

03 We know the rules

NBE, INSA and public procurement rules are understood from the first day.

04 Quality you can check

Joint projects follow our partner's ISO 9001:2015 quality system.

05 Trusted by banks

Our partnership delivers payment technology and executive training to banks.

06 One team, one contract

One Ethiopian team handles purchasing, installation, training and support.

OUR PROMISE

When we finish, your team runs the system with confidence.

Leadership working session

Institutional planning workshop

Photos are from real training and delegation programmes. We get permission before we publish any client image.

LET'S WORK TOGETHER

Ready to modernise? Let's start.

Tell us about your technology plans or training needs. Our team in Addis Ababa will reply to you directly. We usually reply within one business day.
